SKILLS

Systems & Low-Level

C / C++ x86_64 Asm OS Architecture

AI & Data Science

Python TensorFlow PyTorch Scikit-learn
Pandas

Web & Backend

ReactJS Flask REST APIs

Tools & Databases

Git SQL Docker CI/CD VS Code

CERTIFICATIONS

Applied Machine Learning — Verified

Python AI Developer — Mimo

Google Cloud Specialization — NAVTTC (ongoing)

COMPETITIVE PROGRAMMING

400+ problems solved on LeetCode, focused on DSA & algorithm optimization.

INTERESTS

- ML research paper (in progress)
- Open-source security & infrastructure
- Math × AI intersection

PROFESSIONAL SUMMARY

Artificial Intelligence and Mathematics student and active open-source contributor. Triage Collaborator on **drt-hub/drt**, a Python Reverse ETL engine shipped across 30+ PyPI releases, where I build connectors, configuration validation, and observability tooling and review community pull requests. Comfortable working from x86_64 OS kernels up to applied machine learning, and drawn to work that needs both systems depth and clean engineering.

EXPERIENCE

Open-Source Engineer & Triage Collaborator · **drt-hub/drt**

Apr 2026 – Present

- Promoted to Triage Collaborator after sustained, high-quality contributions; review pull requests, triage issues, and shape feature design with maintainers.
- Designed and built the dynamic connector registry that auto-discovers sources and destinations, removing hardcoded dispatch maps across the engine.
- Added the Jira connector (create/update), JSON Schema validation for config files, and data-quality tests (freshness, unique, accepted_values).
- Shipped OpenTelemetry tracing and metrics with lazy, idempotent providers (+680 lines) and dry-run row-count diffs for safe sync previews.
- Selected to contribute with this organization for **Google Summer of Code 2027**.

Full-Stack Developer (Part-Time) · **SudoStudy**

Sep 2025 – Present

- Build backend services and databases for an education platform and integrate third-party APIs.
- Shipped student features including native mobile-camera capture for long-answer questions and quiz-attempt review for teachers.
- Debugged cross-stack failures across quiz, subject, and group-management flows.

Python Developer Intern · **CodeAlpha**

Feb 2025 – Apr 2026

- Automated data-processing pipelines and built scalable Flask backends; improved script efficiency and reliability.

EDUCATION

B.S. Artificial Intelligence

NFC Institute of Engineering & Technology, Multan

B.S. Mathematics

Virtual University of Pakistan

KEY PROJECTS

Arion OS

x86_64 operating system from scratch: kernel, memory management, and system calls.

Linear Algebra Library

Python numerical library built only from primitive types, implementing core routines by hand.

BSAI Projects

Collection of AI/ML projects from BS Artificial Intelligence coursework.

ResQTemp

IoT temperature-monitoring and rescue-alert system built in Assembly.

SELECTED OPEN-SOURCE CONTRIBUTIONS

- apache/hugegraph-ai** — upgraded the Python client CI from 1.3.0 to 1.7.0 and migrated to GitHub service containers with health checks.
- linuxfoundation/crowd.dev** — audited and corrected outdated technical docs, Node version, and repository URLs.
- Additional merged work in **zulip/zulip** and **RocketChat/homeserver**.
